

The Teaching Undergraduate Mathematics Seminar II (TUMS II) proudly
presents:

What Were They Thinking?: Expectations and Attitudes

Presented by Matthew Leingang and the Preceptor Group

We will be examining the following case study:

Hugh Brightman, a second year graduate student, is teaching his own Calculus II class under faculty supervision after a successful year as a TA for a recitation section in a large class taught by a professor. Although not many students have been coming to his office hours, Hugh is confident that they are well prepared for his first hour exam. He is shocked when he discovers that they don't seem to have learned even the most basic techniques and concepts.

This will lead us into a discussion involving teachers' attitudes and expectations.

We welcome anyone from the DEAS, Statistics, and
Mathematics Departments who are interested in teaching.

Thursday, October 20, 2005, 2:30 to 4 p.m.
Science Center 706 - Statistics Department Seminar Room
